

How to find data sheets for our materials

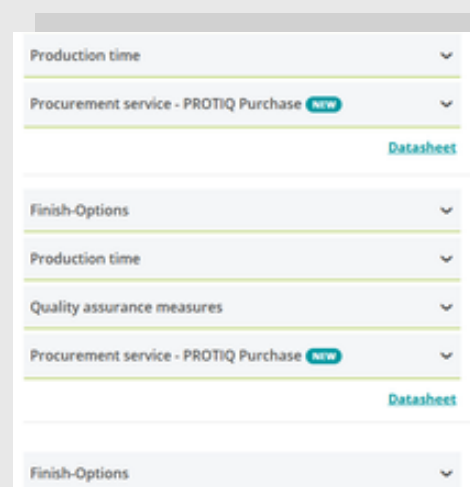

Transparency is a top priority on the PROTIQ Marketplace: Because the manufacturing process, process parameters, machine and post-processing can noticeably change the characteristic values of a material, each Marketplace provider provides its own data sheets. This means you always have the exact values to hand and can reliably compare the various offers.

HOW TO FIND THE DATA SHEETS:

01 Upload your 3D file on our **start page** or click on "Demo component"

02 In the next step, click on "**Choose material**"

03 As soon as you click on a material, you will see the available merchants. Existing **data sheets** are directly linked here.

If you have any further questions about the materials and processes, please contact the PROTIQ Marketplace team.
